

## Accessing & using the catalog (Tutorial A8)

[http://www.atomiclearning.com/k12/en/movie/85841/play\\_window?type=Tutorial&sid=2410](http://www.atomiclearning.com/k12/en/movie/85841/play_window?type=Tutorial&sid=2410)

[00:00:00.00]

You can use the catalog to find functions and symbols. I'm going to insert some numbers into the Lists & Spreadsheet

[00:00:06.00]

application by pressing the "Home" key, and then choosing the Lists & Spreadsheet icon. Remember you can pause this

[00:00:15.00]

movie if you need additional time to enter your data. I'll enter 5, 9, 15, and 63 into column A. Next, I'll name column

[00:00:28.00]

A "stat1" by using the arrow keys on the Touchpad to highlight the cell just to the right of where it says "A" at the

[00:00:34.00]

top of the column, and then I'll type "stat1" and then press Enter. I'd like to calculate some single-variable

[00:00:46.00]

statistics for this data set. There are many ways to do this, but I'm going to use the catalog to insert this data

[00:00:53.00]

into the Calculator application. First, I'm going to insert the Calculator application into a new page by pressing

[00:00:59.00]

the Home key, and then choosing the Calculator icon. Next, I'll press the Catalog key, located just below the Delete

[00:01:09.00]

key, to open the Catalog palette. Here, I can see a list of all available commands. The single-variable statistics

[00:01:20.00]

command is under the letter "o," so I'll press the "o" key on the keypad to jump down to the commands that begin with

[00:01:27.00]

o,” and the current selection, “OneVar,” is the one I want.  
I’m going to press the Tab key to highlight the Wizards

[00:01:36.00]

On checkbox, and then press Enter to check it. The Wizard  
is available for some commands to help you enter the required

[00:01:44.00]

information in the proper format;not all commands have  
a wizard. Now, I’ll press Tab a few times until the OneVar

[00:01:53.00]

command is highlighted, and then I’ll press Enter to move  
into the Wizard. In this case, the single-variable statistics

[00:02:02.00]

wizard prompts me for the number of lists. I’ve only got  
one, so I’ll leave it set to the default of “1,” and then

[00:02:09.00]

press the Enter key to press “OK.” The wizard then prompts  
me to enter some more information. In the top field, “X1

[00:02:17.00]

List,” I’ll press the Click key to select the name of the  
column with my data;I named it “stat1,” so I’ll choose

[00:02:25.00]

that from this menu, and then press the Enter key. I don’t  
have any categories defined, and I’ve already told the

[00:02:32.00]

wizard that my frequency list is 1, so I’ll just press  
the Enter key to calculate the single-variable statistics,

[00:02:40.00]

which are then returned to the Calculator application.
