

## Starting a class session (Tutorial A2)

[http://www.atomiclearning.com/k12/en/movie/86433/play\\_window?type=Tutorial&sid=2422](http://www.atomiclearning.com/k12/en/movie/86433/play_window?type=Tutorial&sid=2422)

[00:00:00.00]

In order to use TI-Nspire Navigator, you must begin a class session before you can interact with your class and perform

[00:00:06.00]

communication functions. Only one class session can be active at a time. Before you begin, your network needs

[00:00:14.00]

to be available to the TI-Nspire Navigator software, so make sure that the devices are turned on and connected.

[00:00:21.00]

To start a class session, on the right side, click on the menu and select which class you'd like to start. Next,

[00:00:29.00]

just to the right of this, click on the Begin Class button. Students using the wireless adapters or cradles must connect

[00:00:38.00]

to the Network first. This only has to be done the first time, or if they change networks. To do this, place the

[00:00:45.00]

wireless adapter on the top of the TI-Nspire CX handheld or dock the handheld in the wireless cradle, and flip the

[00:00:52.00]

switch on the back of the cradle to "ON." Now press the Home key on the handheld, then choose Settings > Network.

[00:01:02.00]

From the Network drop-down menu, choose the classroom's Access Point Network name, and choose Connect. Once class

[00:01:13.00]

is in session and handhelds are connected to the Network, each student can log in from the Home screen by choosing

# TI-Nspire™ Navigator™ Script

[00:01:19.00]

Settings on their handheld and choosing Log In from the menu, then they can enter their username and password according

[00:01:27.00]

to their user information and press Enter to connect. As each student logs in, their name will no longer be in italics,

[00:01:34.00]

and their icon in the Classroom will no longer be faded. Now you're ready to begin interacting with your students

[00:01:42.00]

via their handhelds and the TI-Nspire Navigator software. Once you're ready to end that particular class session,

[00:01:49.00]

you can click on the menu and choose to pause the class or end the class. I'll chose "end class," and disconnect

[00:01:58.00]

from the network.

[00:02:00.00]
