[00:00:00.00]

You can use the Screen Capture tool to save static screens from individual handhelds, as well as present any student

[00:00:08.00]

screen in real time. You can even record and save movies of the screen captures. To use the Screen Capture tool,

[00:00:16.00]

first make sure that you have a current class session running, and your students are logged in via their handhelds. Next,

[00:00:24.00]

click the Tools icon in the toolbar, and click the Screen Capture button. A Select Individual(s) dialog box appears

[00:00:33.00]

allowing you to determine which students' screens you want to capture. In this case, rather than collect the

[00:00:40.00]

entire class's screens, which is the default, I'll click and select Isabel's handheld, and then click OK. Here, I

[00:00:49.00]

can see what's on Isabel's screen. If Isabel changes something on the screen, I can click the Refresh button in the toolbar

[00:00:57.00]

to see the changes, or I can set an Auto-Refresh time in the upper-right corner using the drop-down menu. If you

[00:01:07.00]

want the screens larger, you can either use the Zoom tools just to the left of the Refresh button in the toolbar, or

[00:01:14.00]

change the view. I'll click the View button in the upper-right corner and choose Gallery. Now, if I had multiple

[00:01:25.00]

screens, I'd see them along the left, and I could click on each thumbnail to see a much larger view of each screen.

[00:01:32.00]

You can also select a student handheld and make that student a presenter. To do this, click on the student's screen,

[00:01:42.00]

and then click Make Presenter in the toolbar. This will open a presenter view. The student can now perform actions

[00:01:52.00]

as normal on their handheld. You can see the key presses highlighted in the emulator to the left, as well as a history

[00:01:59.00]

of key presses, reading left-to-right and top-to-bottom, below the large screen display. You can hide these features by

[00:02:08.00]

unchecking the boxes under the screen display. You can also record a movie of the handheld's actions. To do this,

[00:02:18.00]

click the Start Recording button below the screen display, and perform any actions as normal. When complete, click

[00:02:30.00]

Stop Recording. This will bring up a dialog box prompting you to save your movie. I'll give my movie a unique name,

[00:02:39.00]

and then click Save. When you're done using the Live Presenter, click Stop Presenter, and you'll be sent back to the Screen

[00:02:51.00]

Capture window. To close it and return to the main TI-Nspire Navigator console, click the red X.

[00:03:01.00]
