

Inserting an image (Tutorial A12)

http://www.atomiclearning.com/k12/en/movie/86398/play_window?type=Tutorial&sid=2421

[00:00:00.00]

You can insert images into many applications in the TI-Nspire software. In my case, I'll like to add an image

[00:00:07.00]

to a page in the Notes application. I'll start by inserting the Notes application into a new page by clicking Insert,

[00:00:16.00]

and then choosing Notes. To add an image to this document, I can click on Insert again, and choose "image." Note that,

[00:00:27.00]

if the application doesn't accept images, the image option in this menu is grayed out. Next I can navigate to the

[00:00:36.00]

image I want to add. I'll click and select an image sitting on my desktop. TI-Nspire accepts many types of

[00:00:45.00]

image files, including jpg, bmp, and png. Next I'll click Open. The image is then seen inside my document. If I need

[00:00:58.00]

to resize the image, I can click and select it. You can now see a blue frame around it. If I move my cursor to

[00:01:06.00]

one of the edges, I get a double arrow. Now I can click and drag to resize it. You'll notice that this changes

[00:01:15.00]

the aspect ratio, and it distorts the image. I'll move to the toolbar and click the undo arrow. If I want to resize

[00:01:24.00]

the image, and keep the same proportions, I can move to one of the corners on the image, and you'll see I get a

[00:01:32.00]

4 way arrow. Now, when I click and drag on the corner, the aspect ratio stays the same as I resize it. Let's add the

[00:01:42.00]

same image to a graph. I'll click on Insert and choose Graphs. Next I'll click insert again, choose image, and

[00:01:54.00]

then navigate to that same image again. I'll click and select it, and click open. Now we can see the image in

[00:02:04.00]

the graph. If I try to click and drag on the image, you can see I'm moving the graph around, and not the image.

[00:02:11.00]

This is because in the Graphs application, the image is added as a background. I'll need to click on Actions in

[00:02:20.00]

the Document Tools, choose Select, and then Image. Now, I see the blue frame around the image, so I can move to

[00:02:31.00]

the corner, click and drag to resize it.
