

Saving for the Web (Tutorial A13)

http://www.atomiclearning.com/k12/en/movie/86399/play_window?type=Tutorial&sid=2421

[00:00:00.00]

You can create a stand-alone web page from any document you've created using the Export Web Page option. I have

[00:00:08.00]

the Page Sorter selected in the Document Tools, and you can see my Document contains two pages: a graph and a spreadsheet.

[00:00:18.00]

To export this document as a web page, I'll click on the File menu, and choose Export, then Web Page. This opens

[00:00:28.00]

a dialog box where I'll add some information. In the first field I'll enter a title for my Web page. This title will

[00:00:37.00]

be displayed at the top of the Web page. Since my document will appear as an embedded window, or i-frame on the Web page,

[00:00:45.00]

the next fields are used to add text that appears above and below the embedded window. I'll press the Tab

[00:00:53.00]

key to move to the next field. Here I'll add my text that will appear above the window. Once I have that entered, I'll click

[00:01:04.00]

on the next field, and I'll enter my text that will be displayed below the window. Once I have all of that

[00:01:11.00]

entered, I'll click Export. This opens the Save Web Page dialog box. Here I can choose a location on my computer

[00:01:21.00]

to save it. It's a good idea to create a new folder, or choose a specific folder you've created just for your Web

[00:01:29.00]

page. When a TI-Nspire document is exported as a Web page, a copy is made of the document. This copy is saved with

[00:01:38.00]

the same name as the exported HTML file. If you move the HTML file to another location on your computer, you must

[00:01:48.00]

also move the associated TI-Nspire document. I'll give the file a unique name, you can see the file type will

[00:01:57.00]

be HTML, then I'll click Save. The embedded Web page then opens automatically my default Web browser, and I can see

[00:02:07.00]

my document displayed on the page in the TI-Nspire Document Player. Now that we've created our HTML document, the last

[00:02:17.00]

and most important step is publishing it to the Web. This assumes that you manage your own Web site. You can upload the

[00:02:26.00]

HTML document along with your TI-Nspire document to your Web server. If you create pages online, using Google sites,

[00:02:35.00]

TeacherWeb, or Blogger.com, you can paste HTML directly into the page. In addition to this, your embedded document

[00:02:45.00]

must be posted online, like in an FTP folder or Dropbox. I'll close my Web browser and go back to the TI-Nspire software. To copy the HTML,

[00:02:58.00]

you can click on the File menu, choose Export, and then HTML to Clipboard. Now with the HTML copied to the clipboard, you are ready

[00:03:11.00]

to paste it into your Web page. When you paste the html, you will also see some instructions being pasted as well explaining this procedure

TI-Nspire™ Software Script

[00:03:21.00]
in greater detail.

[00:03:24.00]
