

Creating a Quick Graph (Tutorial D1)

http://www.atomiclearning.com/k12/en/movie/85858/play_window?type=Tutorial&sid=2410

[00:00:00.00]

You can create a Quick Graph based on data you've entered into the Lists & Spreadsheet application. I'll create a

[00:00:06.00]

new page by pressing the Home key, and then choosing Lists Spreadsheet. I'll enter some data, pressing the down arrow

[00:00:14.00]

key, or the Enter key after each value. I'll enter 5, 8, 12, and 22. Next, I'll name the column by pressing the

[00:00:26.00]

up arrow key until I've highlighted the cell next to the letter A at the top of Column A. I'll call this column

[00:00:32.00]

"qg" by typing q-g, and then pressing the Enter key. Next, press the up arrow key twice to select the entire column,

[00:00:43.00]

and then press the Menu key. I'll choose Data, and then Quick Graph. Keep in mind that the dots on the graph are

[00:00:53.00]

linked to the data in the list. If I roll over one of those dots, grab it by pressing and holding the Click key, and

[00:01:01.00]

then use the Touchpad to move it around, notice that the values in the list change as well. I'll press "Esc" to

[00:01:10.00]

move out of that. I can easily change many of the parameters of my new graph. I'll change the plot type by pressing

[00:01:18.00]

the Menu key, then choosing Plot Type, and then Box Plot. I could also use this same process by entering and highlighting

TI-Nspire™ Handheld Script

[00:01:29.00]

the lists, and then creating a Scatter Plot.
