TI-Nspire™ Software Script

Sending & deleting documents using TI-Nspire™ software (Tutorial A14)

[00:00:00.00]
There are multiple ways to easily send documents you've
been working on to connected handhelds using the TI-Nspire

[00:00:07.00]
software. I'm currently in the Documents Workspace, and
I have a Graph open that I'd like to send to a connected

[00:00:14.00]
handheld. I've saved the graph to a location on my computer.
I'll then click on the Content Tab to bring up that Workspace.

[00:00:24.00]
Under Resources on the left side, I can browse and locate
my saved file. I'll click on Desktop, and over to the right,

[00:00:35.00]
I can click and select my file. Next I'll click on the
down arrow right next to the Send icon in the toolbar. From

[00:00:44.00]
this menu, I'll choose Send to Connected Handhelds. This
opens the Transfer Tool dialog box. In the Transfer List,

[00:00:53.00]
I can see my file. I'll click and select it. Next I can
choose a destination folder. I'll leave it set to the default,

[00:01:03.00]
which is Transfers with the date. Then I'll click Start
Transfer. I then switch over to the Status tab, and I can

[00:01:14.00]
see that the file was transferred. The display on the connected
handheld will show a dialog box saying that the document

[00:01:21.00]
has been received, and which folder contains the document.
I can then click Stop Transfer, and I'll click Yes in the Confirm

[00:01:31.00]
dialog box, and that brings me back to the Status Tab. I
can then click Close to close the transfer dialog box.

[00:01:41.00]
Next I'll click on my connected handheld under Resources
on the left side. Over to the right, I can see the contents

[00:01:50.00]
of my handheld, and the file that I transferred. Let's
say I want to delete this file from the handheld. I can

[00:01:58.00]
click and select it, then right click and choose Delete.
In the Warning dialog box, I'll click Yes, to permanently

[00:02:08.00]
delete the file from the handheld. You can also transfer
files using drag and drop. I'll click on my desktop again

[00:02:17.00]
on the left side. Over to the right, I'll locate another
file that I want to send to the handheld. I'll then click

[00:02:26.00]
and select it. I'll then click and drag on the file, and
drag it right over my connected handheld on the left side.

[00:02:33.00]
Once I hover over that icon, I can let go of the mouse,
and my file is copied to my handheld. If I click on the

[00:02:44.00]
connected handheld, I can open the transfer folder that
was created, and locate the transferred file.
