

# TI-Nspire™ Software Script

## Using the TI-Nspire™ Computer Link Software (Tutorial A8)

[http://www.atomiclearning.com/k12/en/movie/28232/play\\_window?type=Tutorial&sid=1674](http://www.atomiclearning.com/k12/en/movie/28232/play_window?type=Tutorial&sid=1674)

[00:00:00.00]

To use the TI-Nspire™ Computer Link Software, turn on your device and plug in the Mini USB cable into the device, and then connect

[00:00:09.00]

it to your computer. Next, launch the TI-Nspire™ Computer Link Software. From the Select Handheld dialog box, choose your device

[00:00:19.00]

and press the Select button. There are two main tabs in the Computer Link software: Screen Capture and Explorer. I'll do a screen capture

[00:00:31.00]

first. I'll make sure that I'm on the Screen Capture tab in the upper left corner of the interface, and then I'll press the "capture

[00:00:40.00]

a screen" icon just under the Explorer tab. After a moment, Computer Link will show me the screenshot from the device. To capture another

[00:00:52.00]

screen, I'll change something about the screen on my handheld device, and then I'll press the "capture a screen" icon again.

[00:01:01.00]

Now, I can see the new screenshot appear just to the right of the first one. If you only see individual screenshots, click

[00:01:11.00]

the View Thumbnails icon just above the viewing area to show all your images. To save these captured screens, I'll select the first

[00:01:21.00]

screen, then hold the Control key down on the keyboard and click on the second screen. Now, I'll press the Save icon on the left

[00:01:30.00]

side of the toolbar. This will bring up the Save As dialog box. Here, I can select a unique name for my screens, and determine

[00:01:40.00]

the file type to use. Next, I'll navigate to the appropriate folder for my screens, and press the Save button. Now, I'd like to back

[00:01:52.00]

up a couple of documents that are currently on my device by copying them to my computer. To do this, I'll click the Explorer tab in

[00:02:01.00]

the upper left corner of the interface. In the Explorer, I have two sections of the interface. The upper section shows me files

[00:02:09.00]

that are on my computer; the lower section shows me files that are on my device. The documents that I want to back up are located

[00:02:18.00]

on my device, so I'll double click on the folder in the lower right corner of the interface. Now, I can see my two documents.

[00:02:27.00]

I'm going to select both documents by clicking the top document, and then select the second document by holding down the Shift

[00:02:36.00]

key on the keyboard and clicking on it. I'll click in an empty area of the computer file browser; notice the black highlight

[00:02:45.00]

indicating which section I have selected moves from the handheld file browser to the computer file browser. Now, I'd like to create

[00:02:55.00]

a new folder in which to place these documents. To do this, I'll press the New Folder icon just under the Explorer tab in the upper

[00:03:04.00]

left corner of the interface, and give my new folder a unique name, followed by the Enter key. Now, I'll grab those two documents

[00:03:16.00]

on the device, drag them right on top of my new folder, and let go of the mouse button. Computer Link will show me that the documents

[00:03:26.00]

have been moved into my new folder, and now I can see that the documents are both on the device and on my computer. I can transfer

[00:03:36.00]

files created on my computer to the handheld in the same manner, by clicking and dragging files that are on the computer to folders

[00:03:45.00]

that are on the handheld.

[00:03:47.00]
