

Changing page layout and position (Tutorial A4)

http://www.atomiclearning.com/k12/en/movie/28228/play_window?type=Tutorial&sid=1674

[00:00:00.00]

To change page layout or position, first open your Problem and navigate to the Page where you would like to change the layout.

[00:00:07.00]

Here, I've got a layout that only has 1 application. I'd like to add another application to this particular layout. To do this,

[00:00:18.00]

I'm going to click Page Layout, and then I'll choose Layout 3. Now, I'll click in the new work area and insert the Calculator

[00:00:28.00]

application. Now let's say I prefer to have a Calculator on the top and a graph on the bottom. No problem. To do this, I'm just

[00:00:40.00]

going to go to the Edit menu and then choose "Swap Application." Now, I'm going to get that little circle icon for my pointer, and

[00:00:50.00]

I can just click on the work area where I would like to place the Calculator, so I'm going to roll over the top work area, and

[00:00:58.00]

then I'll click to swap the two applications. If I want to just remove the Calculator application altogether, I can click on it

[00:01:08.00]

to make it active, then I'll press Ctrl-K to select that work area. Notice that the highlight begins to blink. Now I'll just press

[00:01:19.00]

Backspace, and the Calculator application has been removed from the work area. To change the page layout, I'm going to use the

[00:01:30.00]

page sorter on the left side of the screen. Here you can see that I've got several Pages. I'll select Page 5 by clicking on it. Let's

TI-Nspire™ Software Script

[00:01:40.00]

say that I don't want it to be in that position, but I would prefer this to be the second Page in Problem 1. To do this, I'll click

[00:01:49.00]

page 5 and drag it. Notice there's a horizontal gray line that appears; this indicates the new position of the page. I'll put

[00:01:59.00]

the gray line directly below page 1, and then let go of the mouse button. Now you can see it jumps right up there into the second

[00:02:07.00]

position of Problem 1.
