TI-Nspire™ Software Script

Creating a Quick Graph (Tutorial D1)

http://www.atomiclearning.com/k12/en/movie/33162/play_window?type=Tutorial&sid=1674

[00:00:00.00]
You can create a Quick Graph based on data you've entered into
the Lists & Spreadsheet application. I'll create a new page by

[00:00:08.00]
clicking Insert, and then choosing Lists & Spreadsheet. I'll
enter some data, pressing the down arrow key, or the Enter key

[00:00:15.00]
after each value. I'll enter 5, 8, 12, and 22. Next, I'll name
the column by selecting the cell next to the letter A at the top

[00:00:29.00]
of Column A. I'll call this column "qg" by typing q-g, and then
pressing the Enter key. Next, press the up arrow key twice to

[00:00:40.00]
select the entire column, and then click Data and choose Quick
Graph. Keep in mind that the dots on the graph are linked to the

[00:00:52.00]
data in the list. If I click and drag one of those dots, notice
that the values in the list change as well. I can easily change

[00:01:02.00]
many of the parameters of my new graph. I'll change the plot type
by clicking Plot Type, and then choosing Box Plot. I could also

[00:01:13.00]
use this same process, and enter a second data list to create
something like a Scatter Plot.
