TI-Nspire™ Handheld Script

Using the Symbols palette (Tutorial E3)

http://www.atomiclearning.com/k12/en/movie/27963/play_window?type=Tutorial&sid=1670

[00:00:00.00]
You can use the Symbols palette to quickly enter symbols into an application. I'll start by pressing the Home key, and then

[00:00:09.00]
I'll choose Calculator. In this case, I need to evaluate the sine of 90 degrees. I'm going to make sure that my settings are set

[00:00:18.00]
to Approximate before I begin. As you can see at the top of the screen, I'm currently in Radian mode. If I press the sine key

[00:00:27.00]
and then type "90", followed by Enter, you can see that the answer is given in radians. This time, I'll press "sin" and "90" again,

[00:00:38.00]
but before I press Enter, I'll insert the degree symbol using the Symbols palette. To do this, I'll press Ctrl and then the

[00:00:48.00]
Catalog key. Now, from the Symbols palette, I'll highlight the degree symbol using the arrows on the NavPad, and press Enter

[00:00:56.00]
to insert it into the command line next to "90." Now, I can press Enter to evaluate the sine of 90 degrees, and get the correct

[00:01:06.00]
answer of "1."

[00:01:08.00]
