TI-Nspire™ Software Script (Teacher Edition)

Using TI-Nspire™ Teacher Edition software to take screen shots (Tutorial G2)

http://www.atomiclearning.com/k12/en/movie/71970/play_window?type=Tutorial&sid=1674

[00:00:00.00]
You can use the emulator and screen shot tool to capture
individual screens, demonstrate keypresses, and easily

[00:00:07.00]
lead students through classroom activities using the TI-
Nspire handheld. The view you see here is called Normal

[00:00:15.00]
view. It looks and acts like the software version of TI-
Nspire. Although this view gives you the largest screen

[00:00:22.00]
for demonstration purposes, sometimes you may want to emulate
the handheld environment so students using handhelds can

[00:00:29.00]
follow along. Go to View>TI-SmartView Emulator, and you
will see two choices: the full handheld, including keys,

[00:00:39.00]
and the handheld plus an enlarged handheld screen to the
side; let's take a look at this view by selecting it. All

[00:00:48.00]
other tools and menus are exactly the same as the software
view, but now my display looks just like a handheld display.

[00:00:55.00]
I can still use the keyboard and mouse to interact with
items in the screen, or I can roll over individual keys

[00:01:02.00]
and click to "press" them. Note that each keypress is highlighted,
so you can use this view to very easily display the procedure

[00:01:11.00]
to perform a function or enter data into an actual handheld
device. Here, I've got a graph that I created in Graphs &

[00:01:18.00]
Geometry, and I'd like to take a screen shot of it. To
do this, go up to Tools>Screen Shot>Take Shot, or press

[00:01:29.00]
Control-J on the keyboard. This takes me to the Screen
Shot dialog box, and shows me a screen shot from the emulated

[00:01:37.00]
handheld. Notice at the top of window, it says "1 of 2.
This will change as I continue to take screen shots. I

[00:01:46.00]
can use those arrows to move between my shots, or I can
click the Thumbnail View icon to the left of this to see

[00:01:52.00]
all my screen shots side-by-side. To the left of the View
icons are the Zoom In and Zoom Out tools, and then my standard

[00:02:01.00]
Save, Copy, and Delete icons. I'll save my screen shot
by making sure I'm on Thumbnail View and then clicking

[00:02:09.00]
the Save button. Now I can choose a location and click
Save to save my screen shots. I could also copy and paste

[00:02:19.00]
the screen shots to add them to a Word document in the
event that I want to prepare a document to distribute to

[00:02:24.00]
the class.
