

Using Screen Capture & Live Presenter for Networked Computers (Tutorial A9)

http://www.atomiclearning.com/k12/en/movie/94102/play_window?type=Tutorial&sid=2422

[00:00:00.00]

You can use the Screen Capture tool in TI-Nspire Navigator NC to present any logged-in student screen, in real time,

[00:00:07.00]

over the network. To use the Screen Capture tool, first make sure that you have a current class session running,

[00:00:15.00]

and your students are logged in via their TI-Nspire Student Software. Next, click on the Tools menu, and then select

[00:00:22.00]

Screen Capture, Capture Class. A Select Individual(s) dialog box appears allowing you to determine which students' screens

[00:00:31.00]

you want to capture. I'll choose all students in the class, and then click OK. I can click the Auto-Refresh menu in

[00:00:39.00]

the upper right corner, and set an Auto-Refresh time using the options in the list to automatically update the screens

[00:00:44.00]

using time intervals. If you want the screens larger, you can either use the Zoom tools in the toolbar, or change

[00:00:51.00]

the view by clicking on the View menu, and choose Gallery. Now I can see the student screens along the left, and I

[00:00:59.00]

can click on each thumbnail and see a much larger view of each screen. Note that not only is the TI-Nspire Student

[00:01:06.00]

Software displayed, but all applications and the entire display on each student's computer screen. You can save

[00:01:14.00]

any screens you choose by clicking on the screen and selecting File>Save Selected Screens. Then choose where to save them

[00:01:24.00]

and click SAVE. You can also select a student's screen and make that student a presenter. To do this, click on

[00:01:33.00]

the student's screen, and then click Make Presenter in the toolbar. This will open a presenter view. The student

[00:01:41.00]

can now perform actions as normal on their computer. When you're done using the Live Presenter, close the window,

[00:01:48.00]

and you'll be sent back to the Screen Capture window. To close it and return to the main TI-Nspire Navigator console,

[00:01:55.00]

click the red X in the upper right corner.

[00:02:00.00]
